PROFESSIONAL SUMMARY

Software Engineering undergraduate with strong foundations in problem solving and system design, experienced in building scalable, production-ready AI-driven and full-stack platforms with a focus on reliable, high-quality engineering. Eager to contribute to tasks in a team environment. I want to be a part of your incredible growth journey, and I will be able to add value to the organization.

EXPERIENCE

Connect Infosystem | Full-Stack Developer (Internship)

June 2024 - July 2024 | Chennai

- Developed and delivered a fully functional e-commerce platform for computer accessories using React.js and SQL, building responsive UI components from scratch that ensured a consistent, polished experience across Chrome, Firefox, and Edge, cutting reported UI bugs by nearly 40% through thorough QA testing.
- Designed the relational database structure alongside a 4-member team, rewrote inefficient SQL queries using indexing and optimized joins, and resolved 15+ critical layout inconsistencies before launch, resulting in faster page loads and a much cleaner user experience.
- Took ownership of cross-browser testing and UI validation across the full site, identifying and fixing edge-case rendering issues that would have impacted users post-release, which helped the team ship with confidence and reduced post-launch fixes significantly.

PROJECTS

Smart Dam Automation System (IoT + Cloud) | C++, Python, React.js

- Programmed an ESP32 microcontroller to interface with 6 sensor types and trigger automated valve responses in real time, replacing manual monitoring routines and cutting oversight effort by approximately 60% while making dam operations considerably safer.
- Wired the IoT hardware to a cloud backend and built a live React.js dashboard for real-time data visualization, threshold-based alerts, and an ML model that detected anomalies early and helped the operations team act before issues escalated.

PitShop Mechanix | React.js, Java, Spring Boot, MongoDB, WebSockets

- Developed a full-stack mechanic and driver marketplace where drivers locate nearby mechanics on an interactive Leaflet.js map, request service, and mechanic can track the driver's live location via WebSockets, with JWT secured role-based access keeping client and mechanic views completely separate.
- Built REST API endpoints in Spring Boot with MongoDB handling bookings, mechanic discovery, and AI-powered vehicle diagnostics; tuned the deployment on Render to consistently achieve sub-2s load times across all key pages.

Void Park | React.js, Express.js, PostgreSQL, REST APIs, JWT

- Designed and built a parking slot sharing platform end to end, with Express.js API endpoints backed by a normalized PostgreSQL schema that eliminates double bookings and maintains data integrity even under concurrent requests.
- Crafted the React frontend with real-time slot availability updates, location based search, and a smooth booking flow that gets users to a confirmed spot in just a few clicks, secured with JWT authentication and deployed on Render for reliable uptime.

EDUCATION

B.E in Computer Science and Engineering (IoT)

Saveetha Engineering College, Chennai

(August 2022 - May 2026) | CGPA: 8.32

SKILLS

Programming Languages:

Java, C++, Python, JavaScript

Frontend:

React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend:

Spring Boot, Node.js, Express.js, REST APIs, WebSockets, JWT

Databases:

MySQL, PostgreSQL, MongoDB, Firebase

DevOps & Tools:

AWS, Docker, Git, GitHub, CI/CD, Shell Scripting, Linux, Postman, Figma, SDLC, STLC

Testing & Automation:

Selenium, TestNG, JMeter, Cucumber, Test Scenario, Hybrid Testing

Concepts & Frameworks:

Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, IoT

Soft Skills:

Communication, Analytical Thinking, Creativity, Leadership, Self-Motivated, Team Collaboration

CERTIFICATES

- Cloud Computing - NPTEL
- AI with Python - Infosys Springboard
- MongoDB - MongoDB University
- Associate Cloud Engineer Path - Google cloud
- Software Testing and QA - Udemy
- Fundamentals of Graphic Design - Coursera
- Efficient LLM Customization - NVIDIA
- Multimodal RAG using the Vertex AI – Google
- Java Full Stack - Wipro
